Project Explanation

Our project consists of a *map of Kazakhstan*. Its main purpose is to show people, not only other Kazakhs, to describe Kazakhstan and its adventures by rpart by scanning a special qr-code, which will be with this souvenir. Inside of the scanned link will be

provided a web service or application where will be contained full information about Kazakhstan, its distincts, culture, history, religion, interests of nature and some cities, etc. Also every city of our Kazakhstan will have an associated logo. In the future, we want to attach some microchips and by looking at these chips with cameras, smart gadgets will also provide video info in needed language. Our project will be made from wood as material, but if customers want we can replace it with plastic. Main focus area is the map of Kazakhstan, it is divided into sectors with their own special symbols. We know that there exist other wooden maps of Kazakhstan, their features are: attached to the wool, not supported with technology(at least we didn't see other types). Our advantages: compact, can be played as a puzzle for kids, has mobile support and just it has very big potential.
